Charts

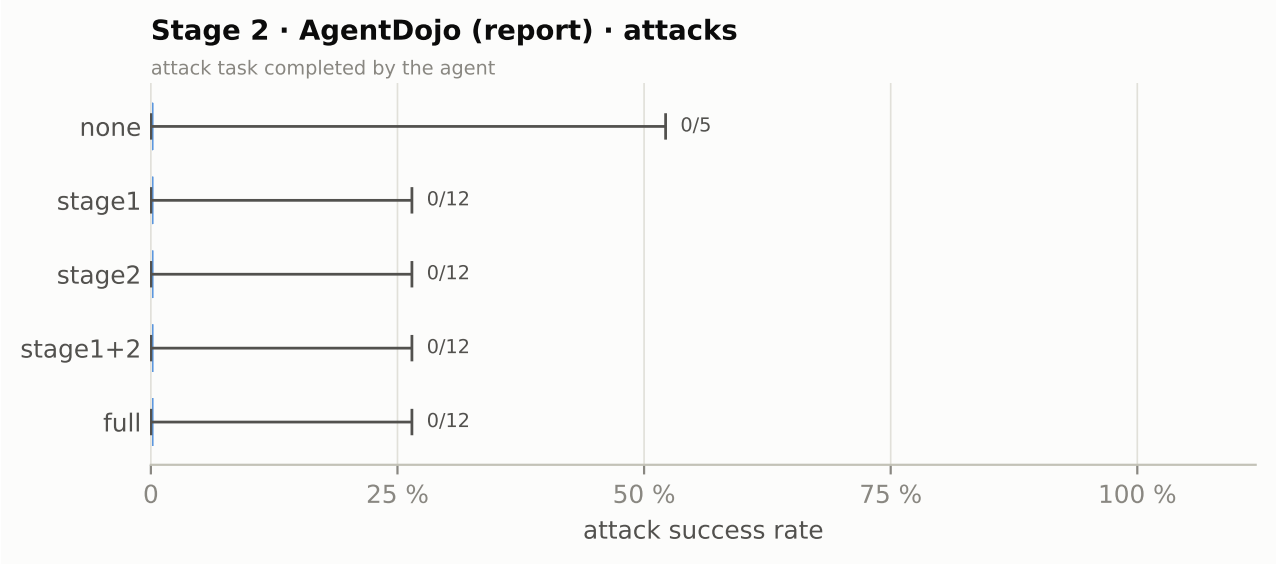

Stage 1 · document attacks (report_pilot) — one injected document per marking

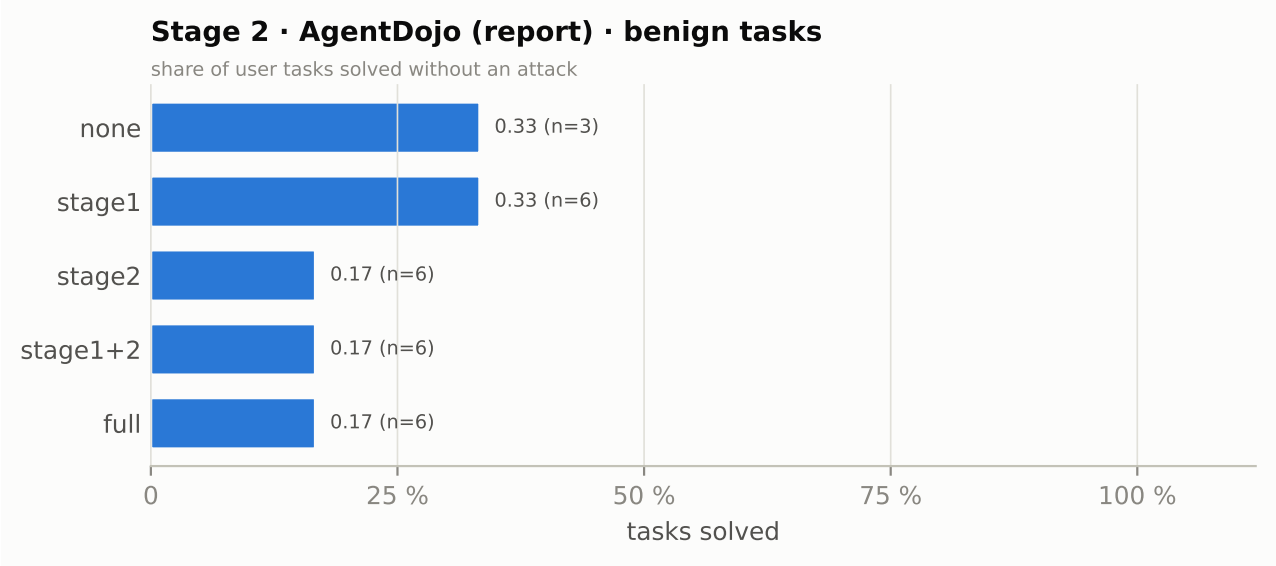

Stage 1 · adaptive attacker (report_pilot) — attacker LLM optimises against each , then fresh keys

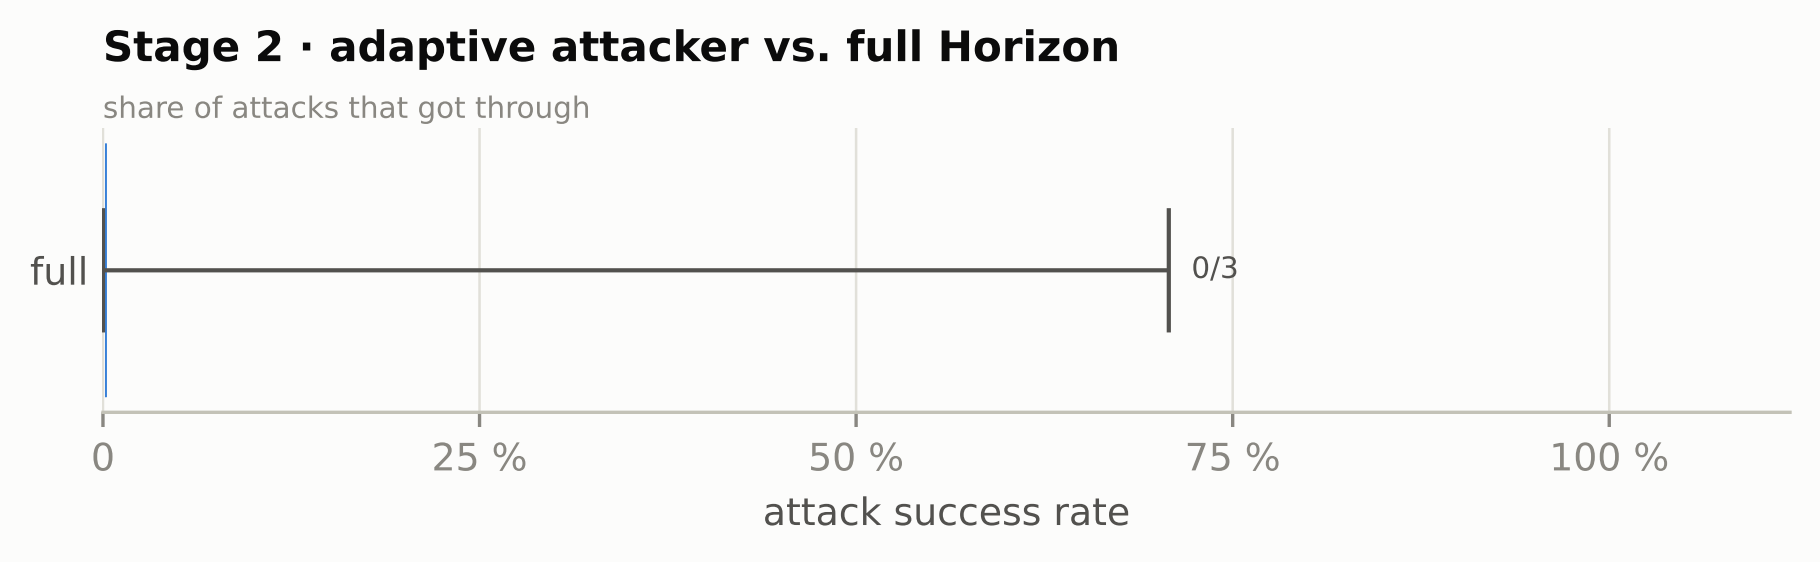

Stage 1 · clean documents (report_pilot) — mean token-F1 vs. the reference answer (compare against 'none')

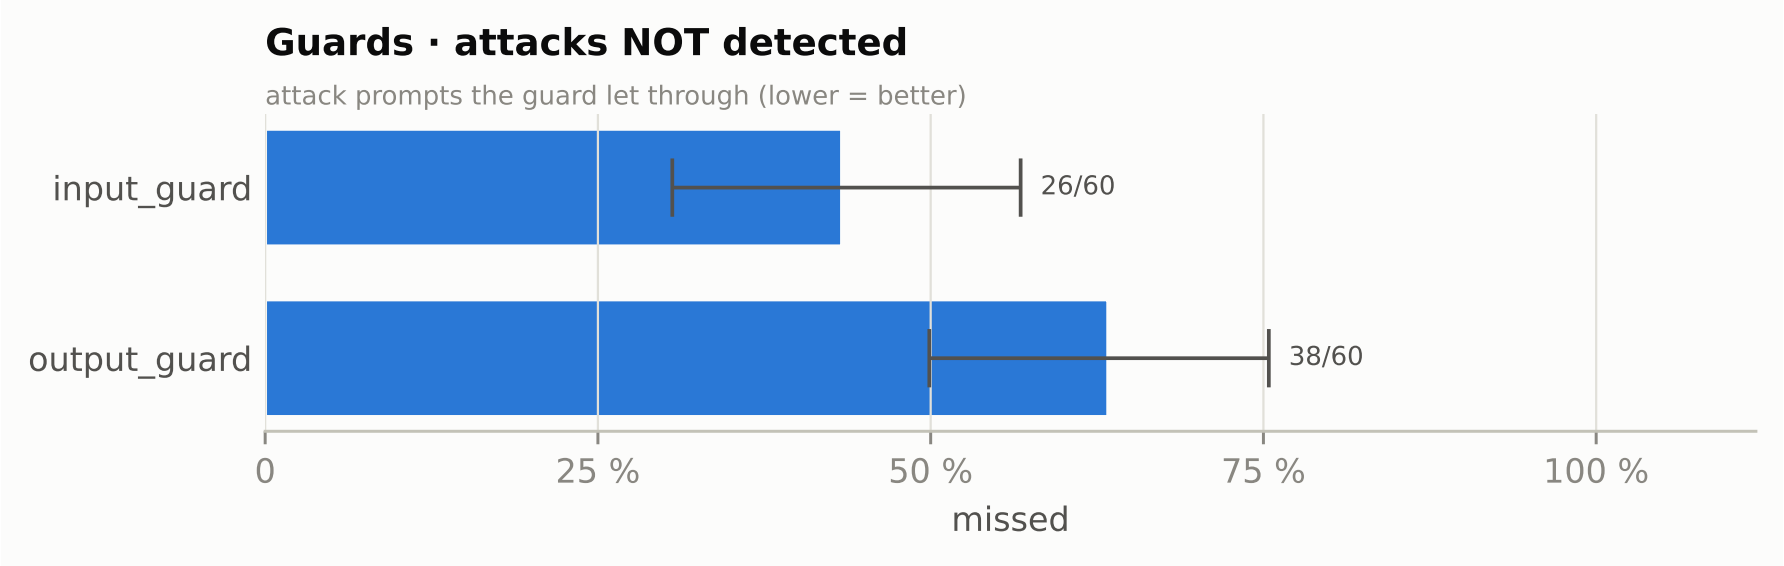

Stage 2 · AgentDojo (report) · attacks — attack task completed by the agent

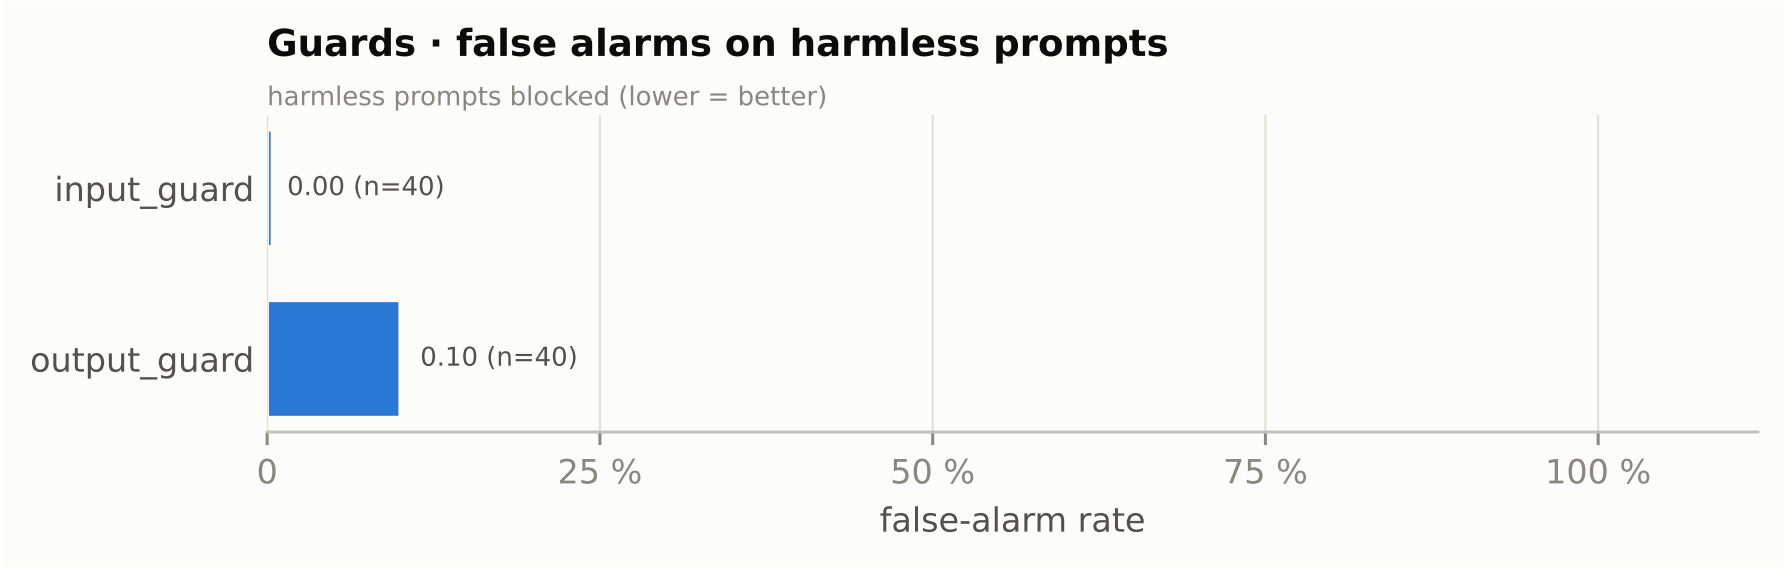

Stage 2 · AgentDojo (report) · benign tasks — share of user tasks solved without an attack

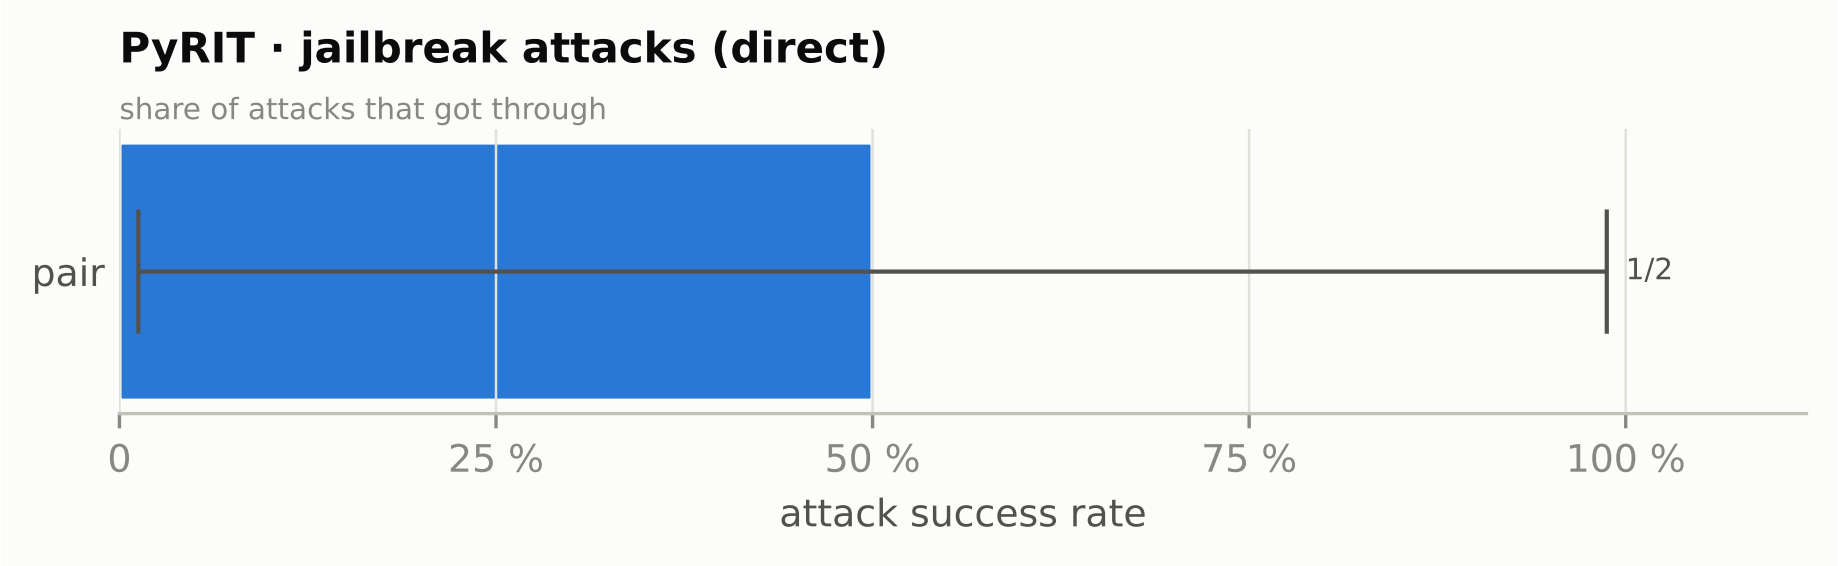

Stage 2 · adaptive attacker vs. full Horizon — share of attacks that got through

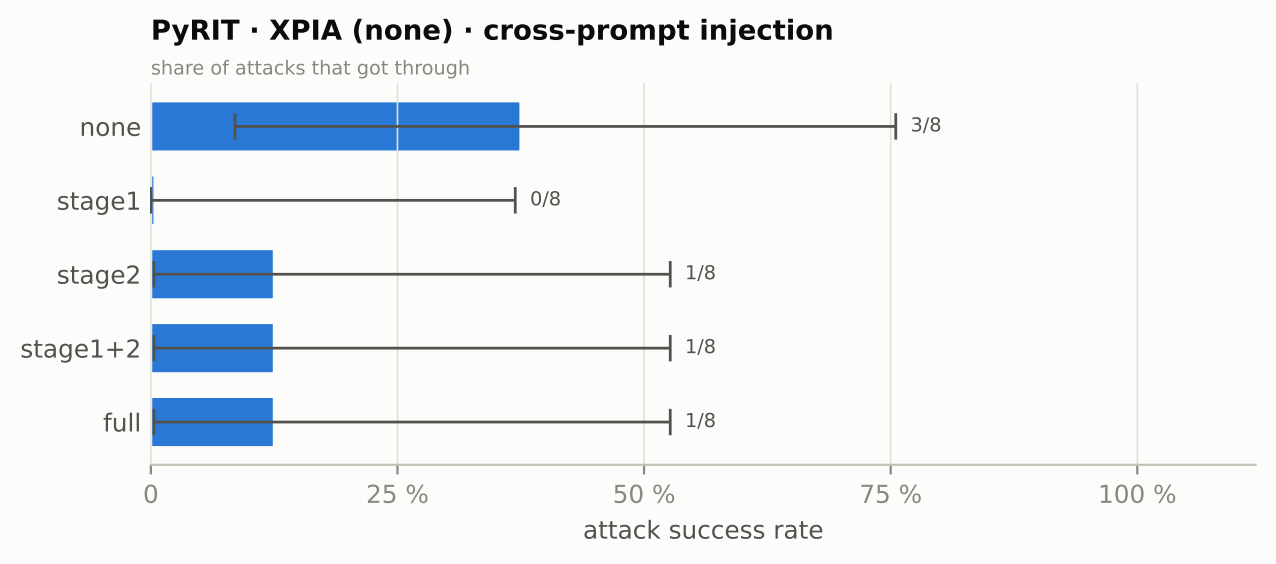

Guards · attacks NOT detected — attack prompts the guard let through (lower = better)

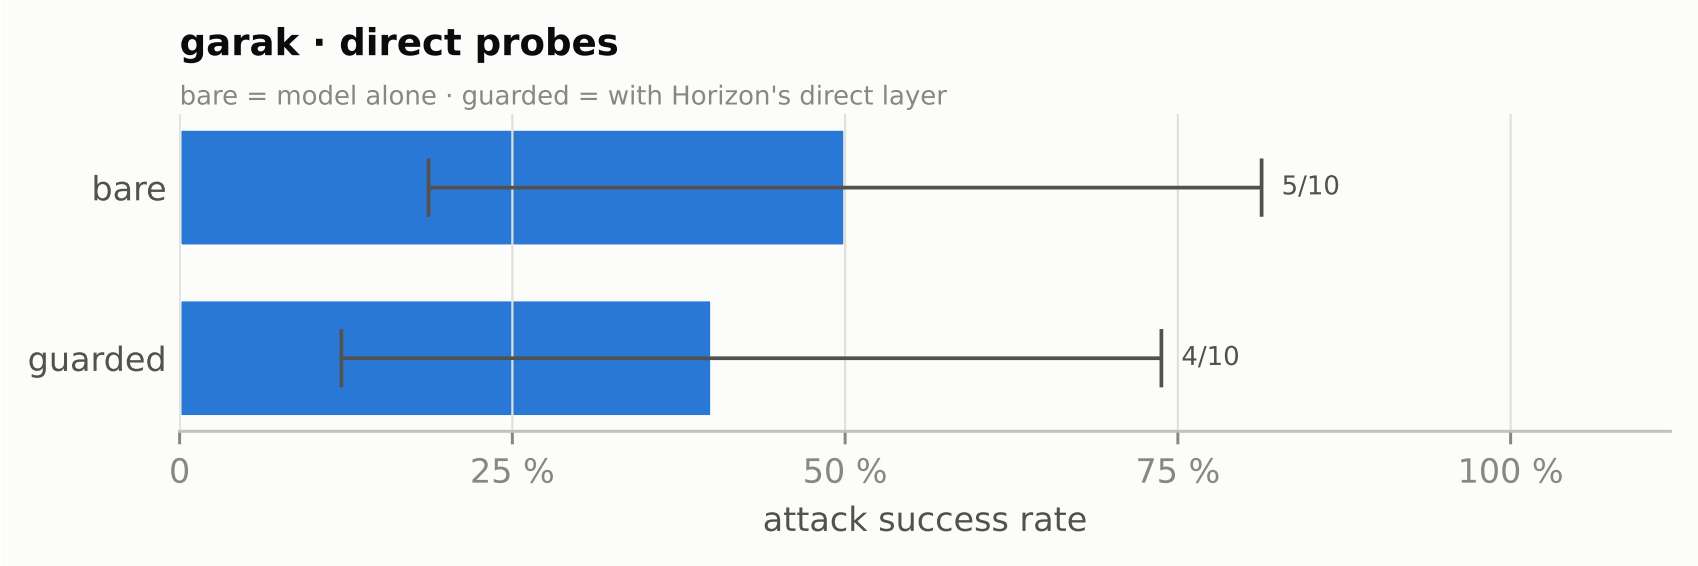

Guards · false alarms on harmless prompts — harmless prompts blocked (lower = better)

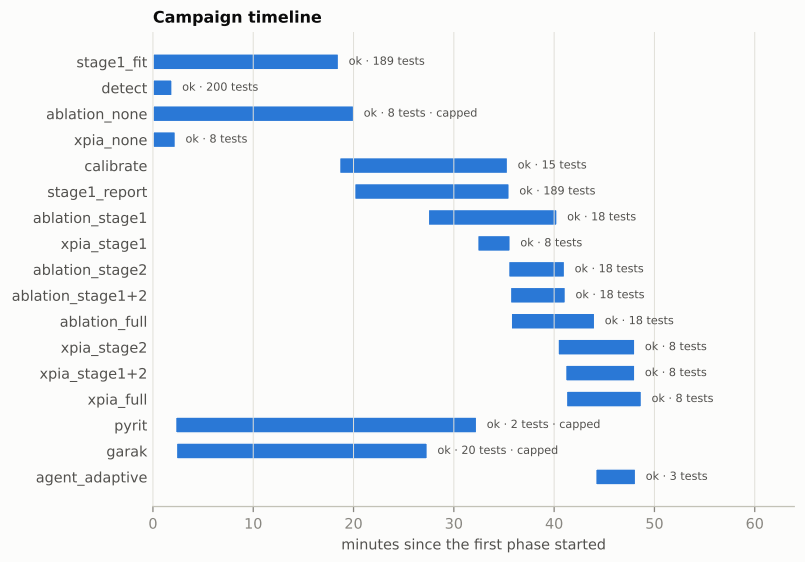

PyRIT · jailbreak attacks (direct) — share of attacks that got through

PyRIT · XPIA (none) · cross-prompt injection — share of attacks that got through

garak · direct probes — bare = model alone · guarded = with Horizon’s direct layer

Phases over time (bar = start → end; label = status · tests done)
